

PRP Positionable Rotating Plate System

Rotating plate system in injection molded Polyamide, composed of two parts, one female and one male. The male part, with small balls scooped out, is the part that is always applied to the holster. The female part, with small nubs, is the part that gets applied to the accessory. Very simple to use and lightweight.

This system can be used on any holster, accessory or adaptor plate. Where applied, permits several positions of your accessory. You have to tighten or loosen the screw placed in center of the PRP Plate.
